Safe-T Box

Secure Data Exchange Broker

SAFE-T

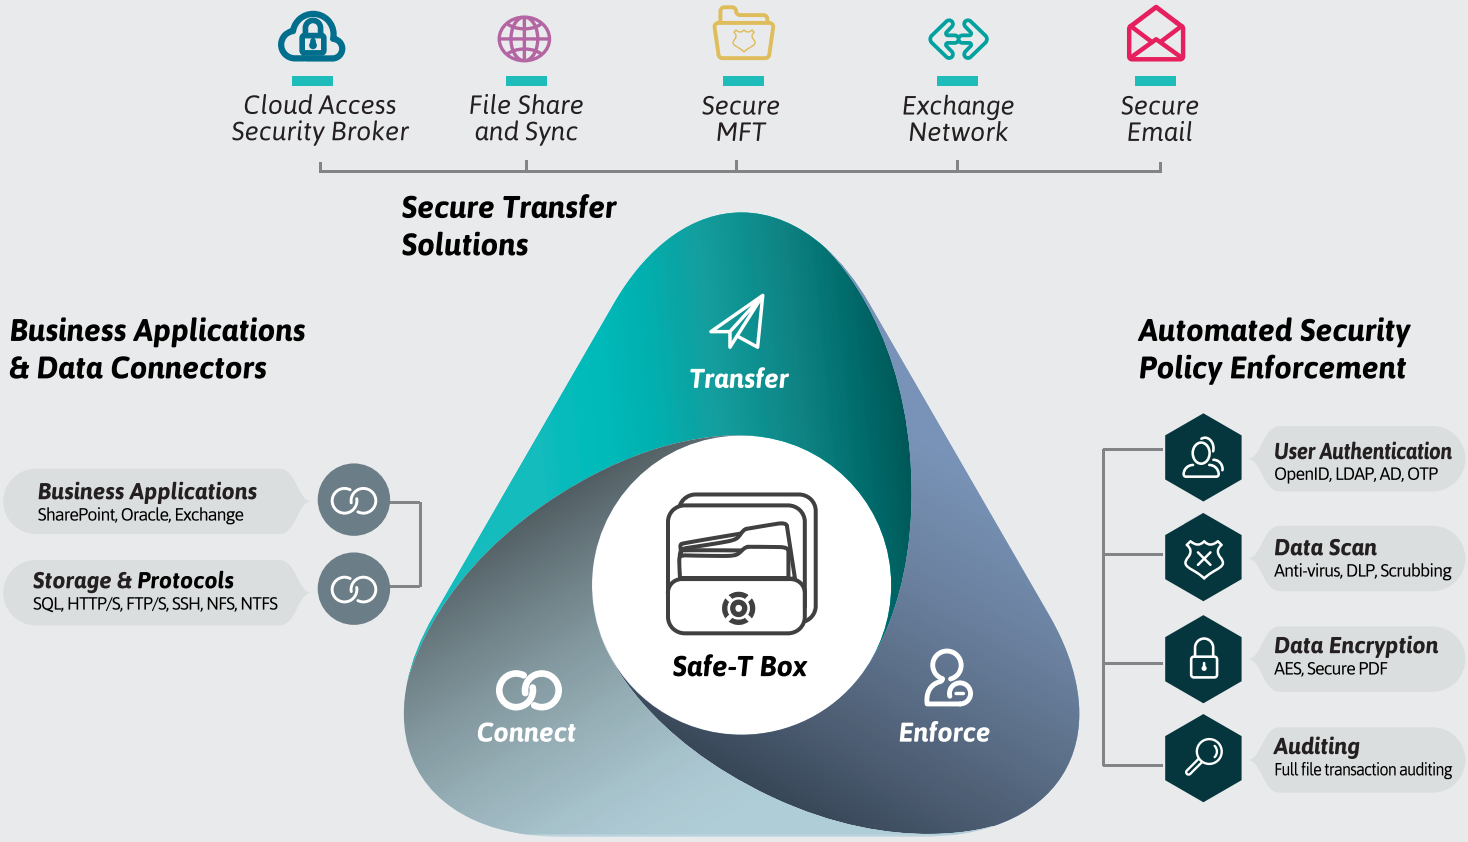
Smart Security Made Simple.

Safe-T Box

Safe-T™ Box enables organizations to broker, control and secure data exchange of any type and size between people, applications, cloud solutions, and businesses. Built on the industry's widest range of pre-configured application and cloud connectors and powered by an automated security policy enforcement engine, Safe-T Box is designed to rapidly add security and control across a wide variety of data exchange patterns for enterprises of all types including to and from The cloud.

Safe-T Box enables organizations to quickly and easily add security layers to existing business and cloud processes, thereby strengthening the control of and reducing the costs of sensitive data exchange. Safe-T Box's unique modular architecture and integration capabilities ensure that it seamlessly integrates into legacy data platforms in the enterprise and cloud, providing policy enforcement and secure data transfer.

With dozens of pre-built connectors to leading business applications, data repositories and cloud services, Safe-T Box offers the industry's most integrated data exchange platform.



Safe-T Box

Secure Data Exchange Broker

Integration with Enterprise Applications and Data Repositories

With dozens of pre-built connectors to leading business applications, data repositories and cloud services, Safe-T Box offers the only true enterprise secure data exchange broker solution.
Safe-T Box connects to business applications and cloud services such as Microsoft SharePoint (online, on premise), Exchange, Office 365, Oracle, Salesforce, DropBox, Box, etc, and enables applications and cloud services to securely share sensitive data with users, other applications, and businesses.

Automated Security Policy Enforcement

By integrating with the organization's security solutions, Safe-T Box automatically enforces security policies on incoming and outgoing exchanged data. Outgoing data is authenticated, scanned with the organization's Data Leak Prevention (DLP) solution, and encrypted to ensure only approved data is shared securely. Incoming data is decrypted, authenticated, and then scanned for viruses and malware using the organization's scanning engines, before it is approved for sharing with people and applications in the organization.

Safe-T's security policy enforcement engine allows enterprises to add security layers to existing data exchange processes easily and quickly. The exchanged data is fully controlled and monitored, providing complete auditing, tracking and archiving of all touch points from origination to destination of data flows.

Secure Data Transfer

Safe-T Box offers multiple innovative solutions to securely transfer shared data:

Cloud Access Security Broker
Utilize cloud storage and services while maintaining full visibility, governance, and control of all data uploaded and downloaded from the cloud.

Secure File sync and share
Secure enterprise collaboration solutions, enabling users to safely share files from any device (desktop, mobile, web) and from any location.

Secure managed file transfer
Securely transfer sensitive files into and outside the organization with a secure, user-friendly file upload and FTP replacement solution.

Secure Data Exchange Network
Transfer any file type and size securely to remote branches, business partners, and customers with an intuitive user-friendly interface.

Secure email
Send encrypted emails of any size and type to registered or ad-hoc recipients, providing a simple, easy to use, fully auditable alternative to PGP.

In addition, Safe-T Box includes a patented secure front-end technology that offers an additional layer of security by enabling organizations to place shared data within the internal network rather than the DMZ, eliminating the need to open incoming ports within the firewall.
Safe-T Box is designed from the ground up with compliance as a top priority, enabling enterprises across sectors, including financial, healthcare, and federal, assisting these enterprises in compliance with over a dozen regulations (e.g. PCI-DSS, HIPAA, FISMA, and others) to protect sensitive data.

Real Life Use Cases of our Customers

Healthcare pre-authorization organization
Uses Safe-T's secure MFT to deploy a secure and scalable solution that receives, holds, and scans any file type before it is uploaded to its storage system.

Insurance company
Securely distributes classified monthly statements from its legacy AS400 application to thousands of agents.

Bank
Deposits checks from mobile applications and scans them with anti-virus engines before sending to the banker application.

Investment House
Uses Safe-T's secure email solution to securely communicate with its thousands of agents.

Manufacturer
Securely shares design files with its industrial suppliers utilizing Safe-T's secure file sync and share solution.

"The ability of Safe-T to collaborate with our team, and to tailor their product to slip stream it into our application architecture, mentioned, have encouraged us to expand our use of their technology across our enterprise."

***Frank Frenzel**, Lead Architect Software Infrastructure at CareCore National*

About Safe-T

Safe-T Data is a provider of secure data exchange broker solutions for a wide range of industries, including: financial, healthcare, and manufacturing organizations.

Safe-T Data's Safe-T Box enables organizations to bridge the gap between the enterprise and the cloud by allowing for secure data sharing between people, applications, cloud solution, and businesses. It is designed for fast and easy deployment, and wide user acceptance.

Safe-T Data's secure front-end solution eliminate the need to store sensitive data in the DMZ, thereby reducing exposure to and risk of data breaches. With offices in North America, Europe, and Israel, Safe-T Data secures millions of files and emails every day.
